

RPG-HRGV-Net: role-partitioned granularity gate for hierarchical evidence routing

角色间与角色内不确定性分离进入后悔监督门控；通过消融检验分区信息的独立贡献。

$$H(S) = H(R) + H(S | R) = U_{between} + U_{within} \quad (\text{P-R1})$$
$$p_f = g p_d + (1 - g) p_m, \quad g \in [0, 1] \quad (\text{P-R3 convex evidence envelope})$$

Formal ablations: full partition / no U_{within} / no $U_{between}$ / total entropy only; no industrial sorting or grade claim.
