

a ABMP-RSG-Net v2

b Analytic properties and non-redundancy

$q_T \geq q_{0,T} - \varepsilon_i$
Posterior loss bound

$A_i = 1 \Rightarrow q_T - q_k \geq \delta$
Anchor margin retention

$$\hat{\rho}_i = \text{Proj}_{[0, \min(c_i^{\text{post}}, c_i^{\text{margin}})]}(\tilde{\rho}_i)$$

Avoid redundant caps:
 $\tau_p - \varepsilon_{\max} > (1 + \delta)/2$
